

BLR Duke

AFT BODY STRAKES Duke 60, A60 & B60!

Enjoy the following benefits* with the installation of our new

BLR AFT BODY STRAKES:

- ➔ Improved directional stability during take-off, climb & landing
- ➔ Improved cabin ride during cruise flight
- ➔ Improved stability and handling at high angles of attack and low airspeed
- ➔ Reduced yaw with or without yaw damper engaged
- ➔ Reduced aft body drag with associated benefits
- ➔ Additional 2 knot reduction in Vmc

This modification consists of two tapered ventral fins (strakes) which are 5½ feet long and extend down 9½ inches when properly riveted to the underside of the aft fuselage. Each strake is a two part split design with the rear-most portions attached to the tailcone. This design allows for the largest possible surface area consistent with rotation angle ground clearance, while maintaining ease of tailcone removal for maintenance and inspections.

The Aft Body Strakes are shipped in kit form with all necessary hardware, comprehensive installation instructions and required documentation ready for installation on your aircraft. Installation times run approximately 16 man-hours.
