Reliability You Can Trust

- Exceptional Dependability
- Eliminates Flight Delays Due To Bulb Failure
- Improves Winglet Lighting Visibility
- Improved Winglet Lighting Durability and Effectivity
- Modernized Appearance

Testimonials:

"The LED lighting system is a great enhancement to our aircraft and definitely improves brightness and reliability. The system also works very well in IMC conditions."

-Drew Furr, Chief Pilot, Dan Hughes Company

"We love the Winglets and the stability in slow flight. We made the switch to the LED system immediately for both our aircraft and the lights rock! We enjoy the low draw and bright visibility during day flights"

-Brian Barber, Chief Pilot, Polaris Industries Inc.

" We've flown about 250 hours with the LED lighting system. The Winglets and LED system have been a great mod for our King Air and it enhances the aircraft's presence on the ramp. We get great comments about the Winglets everywhere we go!"

-Alan Bass, Chief Pilot Lone Trout, LLC
